	3:8 Synchronize Multimedia Elements	To ensure accessibility, provide equivalent alternatives for multimedia elements that are synchronized.
	3:9 Do Not Require Style Sheets	Organize documents so they are readable without requiring an associated style sheet.
Chapter 4: Hardware and Software Consider constraints imposed on them by their users' hardware, software, and speed of connection to the Internet. More than ninety percent of users have their monitor resolutions set to 800x600 or 1024x768 pixels. And while most users at work have high-speed Internet access, most users at home connect at dial-up (56K or less) speeds. It is usually impossible to design for all users. identify the hardware and software used by your primary and secondary audiences and design to maximize the effectiveness of your	4:1 Design for Common Browsers	Design for the common denominators in web browsers. Example of web page from Internet Explorer on a Dell computer running Windows XP Pro.
	4:2 Design for Popular Operating Systems	Ensure that users with any of the leading operating systems can use your site.
	4:3 Design for User's Typical Connection Speed	Design for the connection speed of most users.
